

# Farm sustainability and environmental analysis

What is the economic, environmental and social performance of our farm?  
What would be the effects of a conversion to organic, or the development of a new branch of the farm?

As part of a student thesis, analyse your own or another exciting farm in Switzerland or abroad for its sustainability. The RISE method is used to identify and evaluate strengths, weaknesses and opportunities for farm strategy development. You can also check farms using a variety of tools for environmental analysis, such as the "Aaremilchtool/EffiMi" (Greenhouse Gas Emissions), the "Bern Energy Tool" or "SimaPro" (Life Cycle Assessment).
